## Company profile

- biostep GmbH was founded in June 1997 by Mr. Heiko Mixtacki.
- At the beginning, biostep mainly dealt with radioanalytics and bio-imaging systems. Over the years, the main focus shifted into the direction of biotechnology. However, we are now starting to specialise in radioanalytics again.
- Due to systematic research and development activities, we are able to produce a variety of articles in a production of our own, e.g.
  - various transilluminators, more than 300 models
  - bio-imaging systems
  - protein stains in the fluorescent and visible range
  - laboratory devices
  - electrophoresis units and accessories
  - acquisition, control and analysis software
- We gladly offer our national and international customers a broad, high-quality and innovative product line at fair prices. As a medium-sized company, we attach much importance to quality, flexibility as well as professional support and advice of our customers.

### Electrophoresis

Horizontal & vertical units,  
IEF, power supplies

### Quality control

TD316, test gels,  
greyscale wedges

### PCR

Laboratory  
devices,  
cell culture,  
consumables

## Main focus

### Transilluminators

UV, UV/white-light, LED,  
With intensity setting 50/100%  
or 10-100% or PC-control

### Bio-Imaging software

1D, 2D, array analysis,  
GLP-conform acquisition  
& control software

### Bio-Imaging systems

Standalone, PC-controlled,  
chemiluminescence systems,  
scanner systems

Recently, we released our newly designed website and  
YOU are invited to visit [www.biostep.de](http://www.biostep.de)

Simply benefit from:

- Clearly-structured overview of the products
- Facts and prices up-to-date
- Special offers for saving money
- Search function for fast access to requested items
- Download of several documents
- Webshop for easy ordering around-the-clock
